

Flying Scot, Inc.
Spar Fly Bracket Installation

1. Position Spar Fly Bracket so it is forward of the brace running through the masthead and high enough so that the fly clears the mast spar section when installed.
2. Use a pencil and mark where to drill by using the bracket as a template.
3. Drill a 9/64" hole where marked
4. Install bracket with screws provided

5. To install Spar Fly into bracket, pull tabs together and thread stem through holes
6. Release tabs when threading on stem is in bottom hole and spring tension will hold the fly in place
